

NumPy Exercises

Now that we've learned about NumPy let's test your knowledge. We'll start off with a few simple tasks, and then you'll be asked some more complicated questions.

▼ Import NumPy as np

```
import numpy as np
```

▼ Create an array of 10 zeros

```
np.zeros(10)

array([ 0., 0., 0., 0., 0., 0., 0., 0., 0.])
```

▼ Create an array of 10 ones

▼ Create an array of 10 fives

```
np.ones(10) * 5
    array([ 5., 5., 5., 5., 5., 5., 5., 5.])
```

▼ Create an array of the integers from 10 to 50

```
nn anango (10 51)
```

```
array([10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50])
```

▼ Create an array of all the even integers from 10 to 50

▼ Create a 3x3 matrix with values ranging from 0 to 8

▼ Create a 3x3 identity matrix

▼ Use NumPy to generate a random number between 0 and 1

```
np.random.randint(0,1)
array([ 0.42829726])
```

▼ Use NumPy to generate an array of 25 random numbers sampled from a standard normal distribution

Create the following matrix:

```
np.linspace(0,1,20)

array([[ 0.01,  0.02,  0.03,  0.04,  0.05,  0.06,  0.07,  0.08,  0.09,  0.1 ],
            [ 0.11,  0.12,  0.13,  0.14,  0.15,  0.16,  0.17,  0.18,  0.19,  0.2 ],
            [ 0.21,  0.22,  0.23,  0.24,  0.25,  0.26,  0.27,  0.28,  0.29,  0.3 ],
            [ 0.31,  0.32,  0.33,  0.34,  0.35,  0.36,  0.37,  0.38,  0.39,  0.4 ],
            [ 0.41,  0.42,  0.43,  0.44,  0.45,  0.46,  0.47,  0.48,  0.49,  0.5 ],
            [ 0.51,  0.52,  0.53,  0.54,  0.55,  0.56,  0.57,  0.58,  0.59,  0.6 ],
            [ 0.61,  0.62,  0.63,  0.64,  0.65,  0.66,  0.67,  0.68,  0.69,  0.7 ],
            [ 0.71,  0.72,  0.73,  0.74,  0.75,  0.76,  0.77,  0.78,  0.79,  0.8 ],
            [ 0.81,  0.82,  0.83,  0.84,  0.85,  0.86,  0.87,  0.88,  0.89,  0.9 ],
            [ 0.91,  0.92,  0.93,  0.94,  0.95,  0.96,  0.97,  0.98,  0.99,  1. ]])
```

▼ Create an array of 20 linearly spaced points between 0 and 1:

▼ Numpy Indexing and Selection

Now you will be given a few matrices, and be asked to replicate the resulting matrix outputs:

```
mat = np.arange(1,26).reshape(5,5)
mat
     array([[1, 2, 3, 4, 5],
           [6, 7, 8, 9, 10],
            [11, 12, 13, 14, 15],
            [16, 17, 18, 19, 20],
            [21, 22, 23, 24, 25]])
# WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
# BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
# BE ABLE TO SEE THE OUTPUT ANY MORE
mat[2: ,1:]
     array([[12, 13, 14, 15],
            [17, 18, 19, 20],
            [22, 23, 24, 25]])
# WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
# BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
# BE ABLE TO SEE THE OUTPUT ANY MORE
mat[3,4]
     20
# WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
# BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
# BE ABLE TO SEE THE OUTPUT ANY MORE
mat[0:3,1:2]
     array([[ 2],
           [7],
            [12]])
# WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
# BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
# BE ABLE TO SEE THE OUTPUT ANY MORE
```

```
mat[4]
    array([21, 22, 23, 24, 25])

# WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
# BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
# BE ABLE TO SEE THE OUTPUT ANY MORE

mat[3:]
    array([[16, 17, 18, 19, 20],
        [21, 22, 23, 24, 25]])
```

- ▼ Now do the following

```
mat.sum()
325
```

▼ Get the standard deviation of the values in mat

```
mat.std()
7.2111025509279782
```

▼ Get the sum of all the columns in mat

```
mat.sum(axis=1)

array([55, 60, 65, 70, 75])
```

Great Job!
